

TUGAS PEMROSESAN PARALEL

“Visualisasi Data di Tableau”

DISUSUN OLEH:

AGUNG RIZQI RAMADHAN

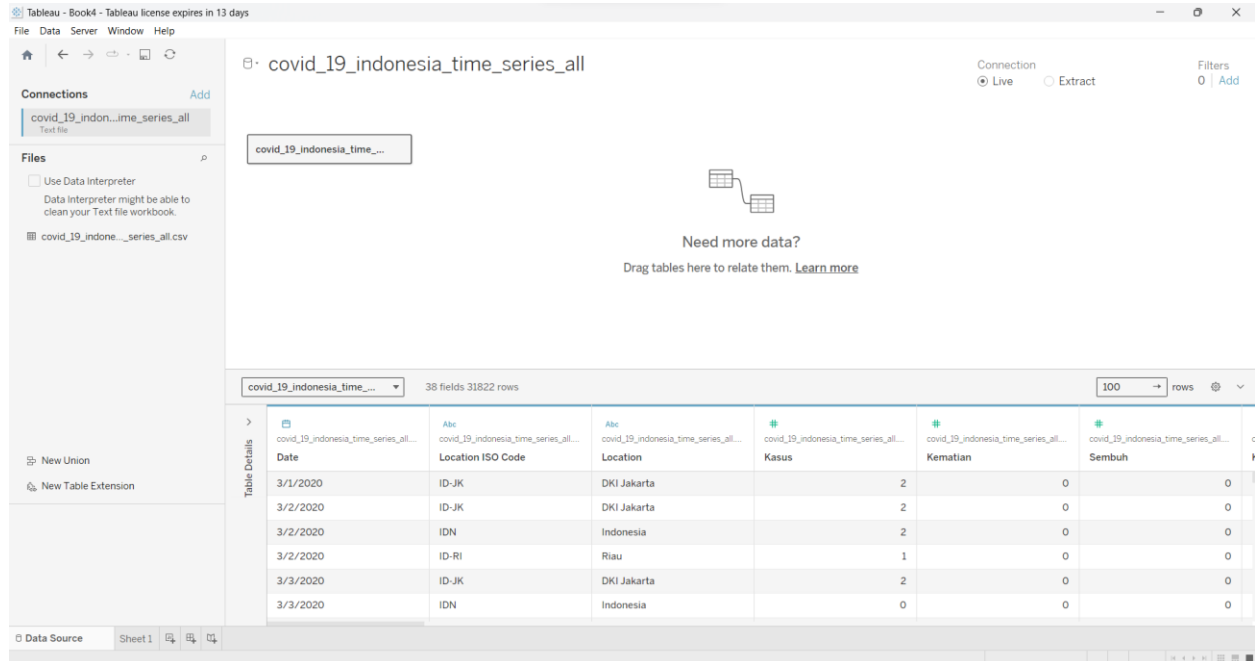

09011382126157

SISTEM KOMPUTER 5 C

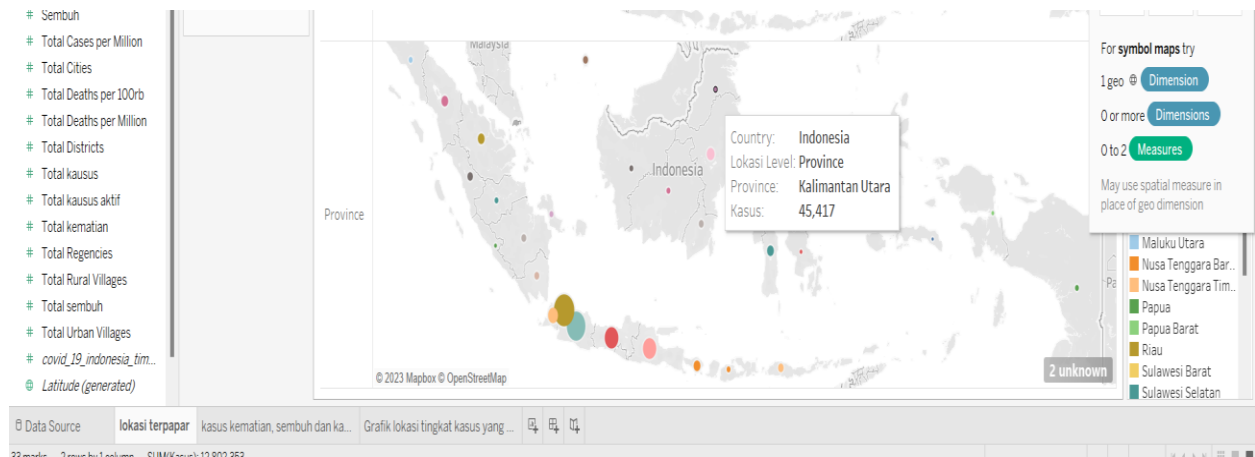

Dosen Pengampu :

ADI HERMANSYAH, S.KOM., M.T

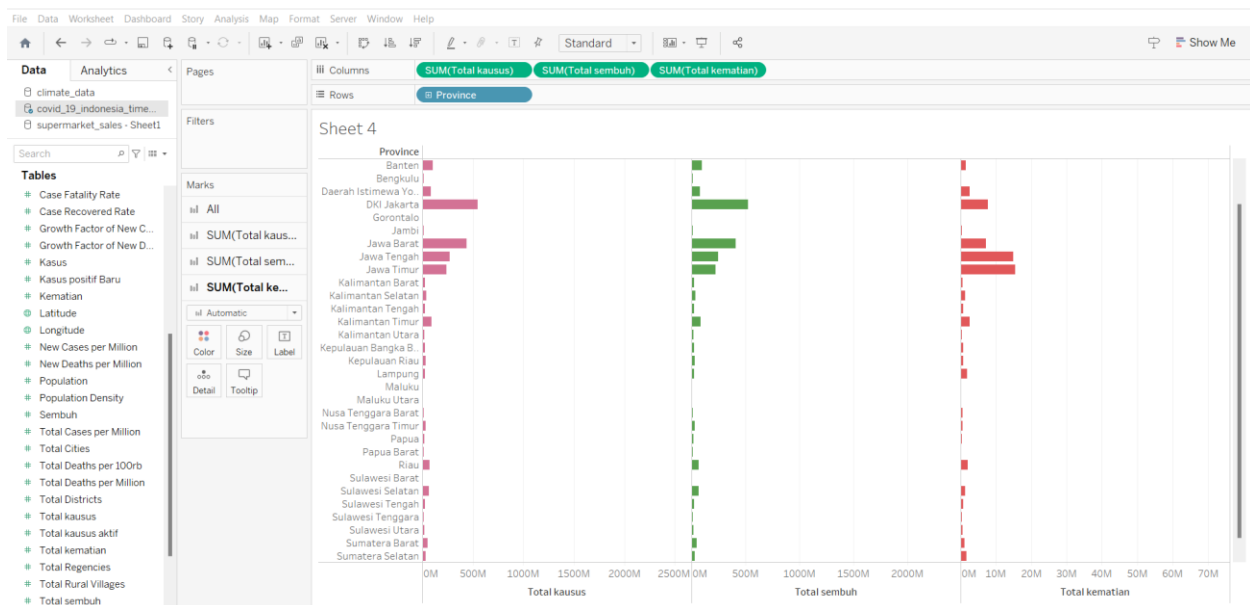

AHMAD HERYANTO, S.KOM, M.T.

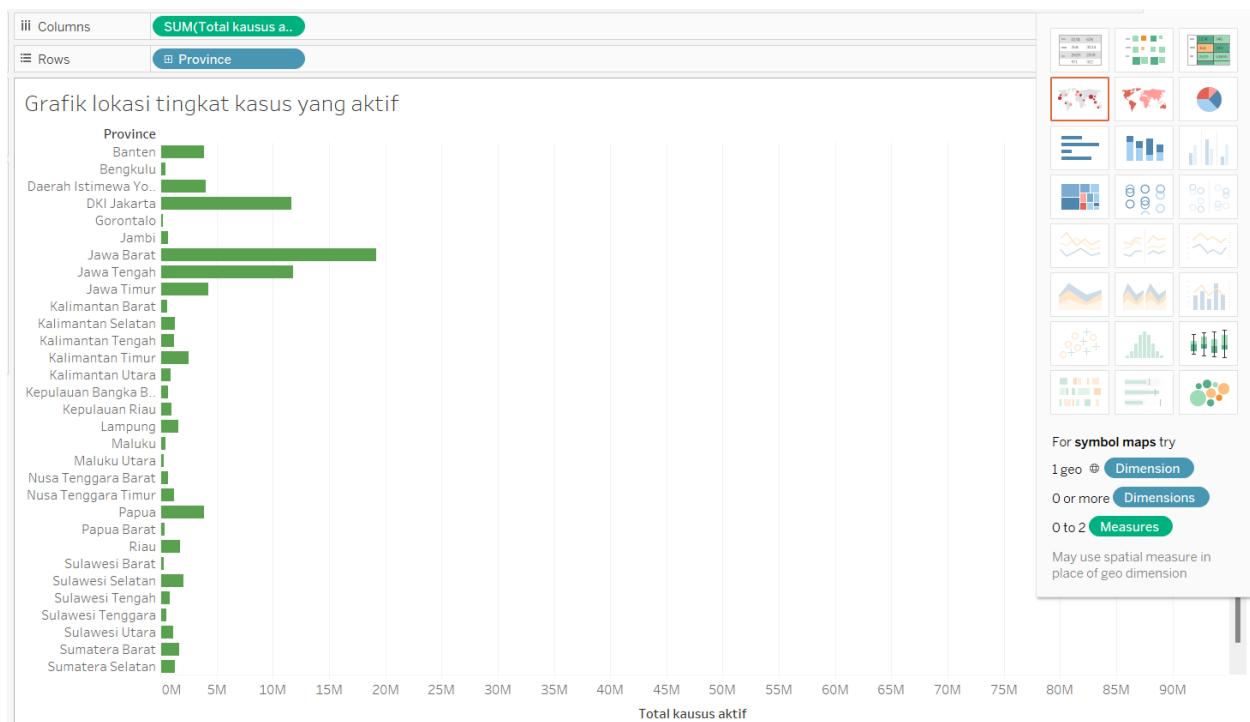

Langkah pertama setelah saya memasuki aplikasi tableau, saya memilih data yang akan saya visualisasi. dapat kita lihat saya memilih data covid 19. Selanjutnya saya klik sheet1 .

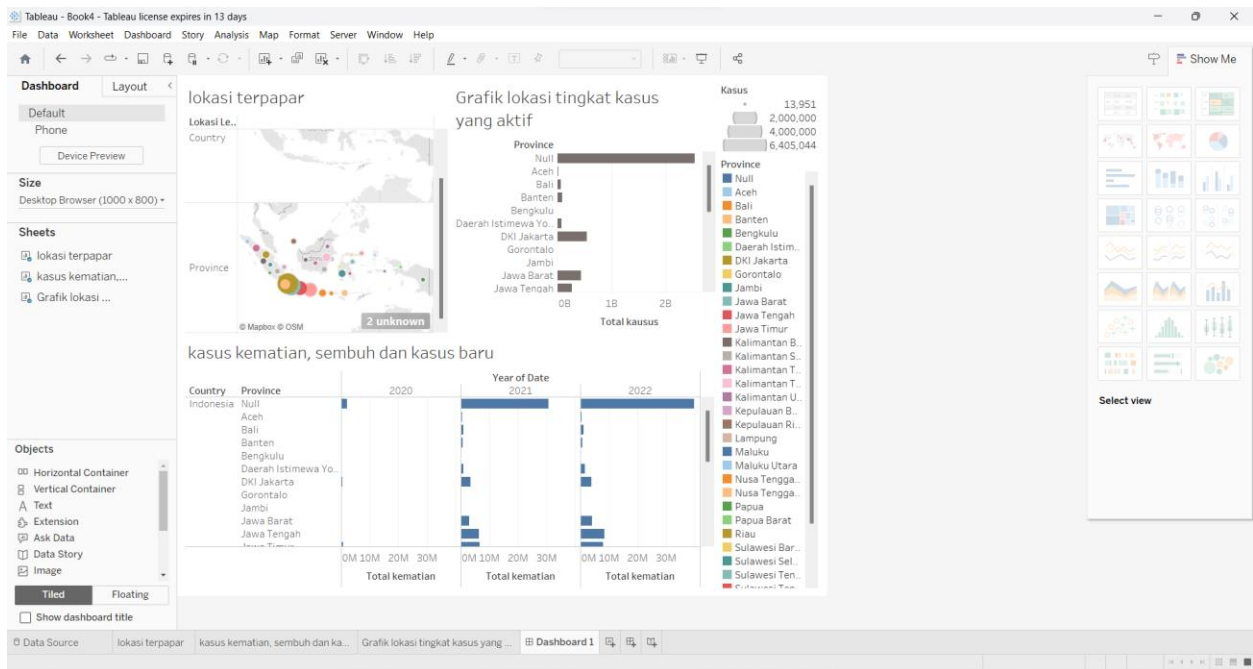

setelah itu kita bisa membuat visualisasi datanya, disini saya mevisualisasikan lokasi yg terpapar dengan map, dan titik pada gambar adalah titik yang terpapar covid, semaki besar lingkaran berarti semakin tinggi kasus pada titik tersebut

Berikutnya disini saya memvisualisasikan total kasus, kematian, dan sembuh

Dan ini hasil visualisasi dari tingkat kasus yang aktif dari sebuah provinsi, dan pada visualisasi

Dan ini tampilan dasbornya

Berikut percobaan menginstal Wordpress

```

lines 1-28/28 (END)

to log into MariaDB without having to have a user account created for them. This is intended only for testing, and to make the installation go a bit smoother. You should remove them before moving into a production environment.

Remove anonymous users? [Y/n] y
... Success!

Normally, root should only be allowed to connect from 'localhost'. This ensures that someone cannot guess at the root password from the network.

Disallow root login remotely? [Y/n] y
... Success!

By default, MariaDB comes with a database named 'test' that anyone can access. This is also intended only for testing, and should be removed before moving into a production environment.

Remove test database and access to it? [Y/n] y
- Dropping test database...
... Success!
- Removing privileges on test database...
... Success!

Reloading the privilege tables will ensure that all changes made so far will take effect immediately.

Reload privilege tables now? [Y/n] y
... Success!

Cleaning up...

All done! If you've completed all of the above steps, your MariaDB installation should now be secure.

Thanks for using MariaDB!
root@agung12:/home/agungagung#
